

Pro Photo Sorter — Quick Start

Version 1.4.5e · Fully offline · Windows desktop

Install (60 seconds)

1. Double-click **Pro Photo Sorter Setup 1.4.5.exe**
2. If Windows shows a blue "SmartScreen" warning: **More info** → **Run anyway** (indie app, not Microsoft-signed)
3. Wait for the installer to finish. The app opens automatically.

Installed to: `C:\Users\<You>\AppData\Local\Programs\Pro Photo Sorter\`

First launch (2 minutes to a sorted photo)

1. **Splash Screen** welcomes you — click "Get Started". Won't nag again until the next version.
 2. **Sample photos** are pre-loaded so you can practice sorting before touching your own.
 3. Click **Load Source** (top-left) → pick a folder of photos. They appear in the filmstrip.
 4. Click any photo → arrow keys / arrow buttons move through. Press **1–5** to rate.
 5. Open **Tag Manager** (toolbar) → pick a Category → drill into its sub-folder tree → click chips to build a destination path like `Wildlife / Bears / Grizzly / Alaska_Trip`.
 6. Store the photo with **Ctrl+S** (or the Store button). Originals never overwritten — a fresh JPG is written to your destination.

Top 8 gestures

Pro Photo Sorter

© Captain Kurt — All rights reserved

Gesture	What it does
Click chip	Highlights it (visual feedback)
[Select] button in a sub-folder row	Reveals checkboxes for multi-select
Drag chip	Move to another sub-folder (Ctrl-drag = copy)
Paste list button	Bulk-add many chips from a comma/newline/semicolon list
Right-click chip	Move-to / Copy-to menu across every sub-folder
Trash button (Tag Manager header)	See & restore recently deleted chips
 or 	Peek the original inside the Editor
1–5	Star-rate the current photo (0 clears)

Multi-select workflow

1. Expand a sub-folder chevron in the Tag Manager
2. Click **[Select]** on the right side of its "Filename tags for..." header
3. Click chips to tick them — a floating bar appears: 
4. **Delete** sends every ticked chip to Chip Trash (undoable)
5. **Convert** promotes every ticked chip to its own nested sub-folder
6. Or drag any ticked chip → all selected chips move together

Compare view

- Toolbar shows **×1 / ×2 / ×3** — switches how many images sit side-by-side
- Each pane is independently zoomable (mouse wheel over the pane)
- Left/right arrow buttons still work — they advance the active pane
- Press **×1** to return to single view and resume tagging

License / Trial

Every stored file gets  appended until you paste a license key from Gumroad into Settings. The suffix disappears instantly and you can batch-rename older  files from the same panel.
